1. General Overview

Project Name

e-Hospital

Organisation

IntelliSOFT Consulting Limited

Project country

Kenya

Geographic scope

eHospital has been implemented in 3 health facilities within the East African region with more planned implementations in the near future; Nairobi - Kenya, Kijabe - Kenya and Juba - South Sudan.

Overview of the digital health implementation

eHospital is an end-to-end hospital information system that integrates medical records system, lab system, and ERP in a distribution that addresses the workflows, forms, and reports of the East African market. In addition to being an end-to-end facility system which captures fundamental patient touchpoints, eHospital is a distribution of Bahmni. This essentially means that e-hospital leverages the software excellence and technical architecture of a globally proven system backed by a strong community committed to the continuous development of the product.
