

**MAKE  
BREACHES  
IRRELEVANT.**

# Overview

**StrongKey makes data security simple.** We provide an end-to-end, comprehensive security platform backed by cryptographic hardware protection. With customers across the globe and almost two decades of cryptographic key management experience under our belt, we understand your data security needs better than anyone in the industry.

## Business Solutions

---

### **COMPLIANCE**

*with data security & privacy regulations*

### **ENCRYPTION**

*of sensitive data*

### **ELIMINATION OF PASSWORDS**

*through strong authentication*

### **SECURE CLOUD STORAGE**

*without storing keys in cloud*

### **RANSOMWARE PROTECTION**

*using single sign-on and key management*

### **DATA INTEGRITY**

*verified by digital signatures*

# What We Do

---

We utilize our **Secure the Core** process to protect the heart of your computing infrastructure—the data. We work with you to determine security needs and solutions to protect that data when other measures fail. Our capabilities are built upon four key pillars:

**STRONG  
AUTHENTICATION**

**TARGETED  
DATA ENCRYPTION**

**VERIFIABLE DIGITAL  
SIGNATURES**

**HARDWARE-BASED  
KEY MANAGEMENT**

# So You Can

---

**Protect PII (personally-identifiable information) and other important data across industries**

**Eliminate passwords in web applications—in some cases, without modifying the application**

**Exceed regulatory requirements for PCI DSS, HIPAA, GDPR, and CCPA**

**Protect against password phishing attacks**

**Manage cryptographic keys more securely**

**Utilize highest-assurance industry authentication standards (recommended by NIST)**

# Consulting Services

---

We specialize in custom software solutions, including designing and deploying world-class PKIs, migrating PKI smartcards (CAC, PIV) to FIDO, and cryptographic software design and implementation. Contact us to discuss your specific security needs.

# Our Appliances

StrongKey supports enterprises and public-sector entities around the world. Our Tellaro™ appliances share the same core cryptography and features, including:

- **Enterprise Key Management System**
- **Single-Tenant, FIPS 140-2-Certified Hardware Cryptoprocessor (HSM or TPM)**
- **SecureOS™ Security Stack**

## TELLARO E-Series

### PHYSICAL HARDWARE

Data center-class machine. Manages billions of keys. Capable of 1,000 transactions per second.

### CUSTOMER SIZE

Large enterprises with 500–250,000 employees (or more). Can be deployed in hub-and-spoke clusters for greater reach.

### CUSTOMIZATION

Deployments tend to be customized, on-site installations, and integrated with current customer infrastructure.

### APPLICATION SUPPORT

Easy integration with your applications and infrastructure. Protect legacy applications without modifying them. StrongKey-developed applications for cloud storage and secure file sharing.

## TELLARO T-Series

Small computer able to be installed anywhere. Manages a hundred million keys. Capable of 100 transactions per second.

Mid-level businesses, remote offices, and agencies. Also appropriate for Enterprise proof-of-concept and development purposes.

Can be customized for smaller deployments and also able to serve as a standalone device for development and proof-of-concepts.

Same support as E-Series.

# Our Work

---

With our appliances, our customers overcome the fear of data breaches by eliminating the burden of passwords, protecting data at the core, and maintaining compliance. We're at our best working collaboratively to address our customers' cybersecurity challenges.

Here are a few examples:

“ The StrongKey appliance is an **exceptional product**, not just for the money, but in terms of its performance, its flexibility, and **future-proof design**. This appliance can easily be adapted to other kinds of information that require encryption and protection.”

– Director of Information Technology

“ StrongKey's staff demonstrates **exemplary technical prowess** consistently, which enabled the success of one of the most difficult parts of PCI compliance. Their consistent delivery combined with a **killer solution** is a striking combination, which I strongly recommend.”

– Sr. Manager, Enterprise Architecture

“ We engaged with StrongKey to provide PKI services and we could not have found a more **knowledgeable, honest, and easy to work with partner**. From a technical perspective Arshad Noor and his team are well versed with the PKI industry and played a major role in delivering our project on-time.”

– Sr. IT Project/Program Manager,  
Telecommunications Enterprise

**STRONGKEY**

# Why StrongKey?

## We focus on what matters, so you don't have to.

Our products are designed to protect your data, even when other preventative measures fail. As your partner in security, we focus on keeping you aware of the latest data security technology, updating our products to be as secure as possible, and listening to how we can better protect your data.

## We are leading the way.

Our cybersecurity technology is currently protecting some of the leading industries around the globe—ranging from health to financial services—and multiple national central banks. We help our partners stay ahead of the curve and confident in the security of their data.

## We make it easy.

Our entire product line is designed to provide our partners with a highly-implementable solution that doesn't require months of technical development or any expensive infrastructure to put in place.

Need a custom consult? We can help.
