

OpenFn User Journeys

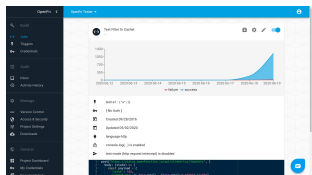

S3 provides *different paths* to achieving **Security**, **Stability**, and **Scalability** in digital health

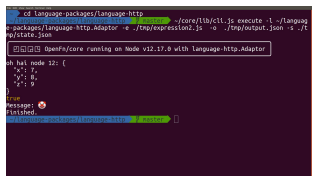

A clinical user visits
OpenFn.org

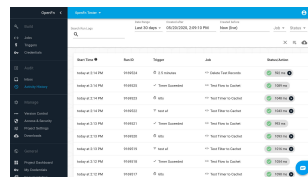

Configures workflows
(real-time or periodic) via
user interface

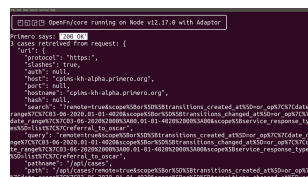

A power user runs
OpenFn/devtools
locally

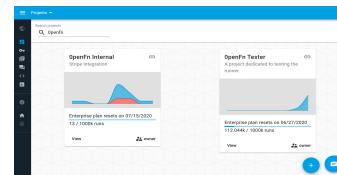

Configures workflows
(real-time or periodic) via
IDE and command line

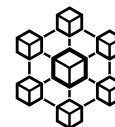

Tests workflows in
real-time during the pilot

And securely scales-up
instantly on **OpenFn.org**

While retaining
the flexibility to
change paths
later

Or exports the tested
configuration as a
free-and-open-source
OpenFn/microservice,
to deploy anywhere in the
world
