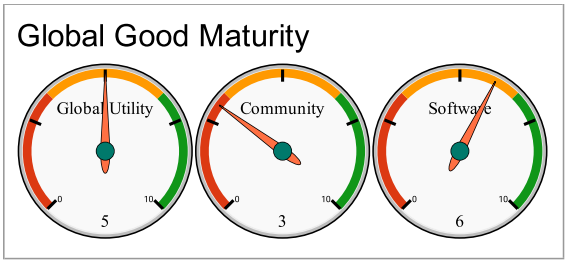
CareCR_Global Good Maturity Assessment



Core Indicator and Calculated Score [0-10]	Sub-Indicator	*change rating here*	
Global Utility	Country Utilization	Medium	At least four countries or states actively use the tool as part of their health information system with at least 20% of total nation-wide or state-wide target users routinely using product/service as intended
5	Country Strategy	Medium	At least four countries or states have included the tool as part of their eHealth strategy or framework
	Digital Health Interventions	Medium	The tool partially meets digital functional requirements (as defined by WHO's Classification of Digital Health Interventions) without signifigant customization or configuration
	Source Code Accessibility	High	Source code exists on a publicly accessible repository and licensed under an Open Source Initiative approved license. Software is structured to allow local customizations and new modules and functionality without requiring forking of main code
	Funding and Revenue	Low	At most two revenue streams exists. Revenue streams are largely dependent on time-bound project implementations
Community	Developer, Contributor and Implementor Community Engagement	Low	Less than 10% of estimated total number of developers, contributors, and implementers are on a communication platform
3	Community Governance	Low	There is no community governance structure in place to direct continued development of the digital health tool
	Software Roadmap	Medium	There is a publicly accessible and routintely maintained platform for new feature requests. A software roadmap exists describing currently planned and resourced development activities
	User Documentation	Medium	Some user documentation exists (training manual, demo videos) but only addresses a limited subset of common functionality
	Multi-Lingual Support	Medium	Software has be internationalized to support multiple languages (though may not have been translated) for primary portions of the user interface. Some user documentation exists in more than one language
Software	Technical Documentation	Medium	Some technical documentation exists of the source code, use cases, and functional requirements
6	Software Productization	High	Software has been packaged for one or more common operating systems or platforms. Software upgrades can largely be achieved without manual intervention. Unit or integration testing is part of the release process
	Interoperability and Data Accessibility	Medium	Some APIs are available for accessing and managing data. There are user-facing interfaces to export core data and metadata in the system (e.g. in CSV format) for further analysis and data transfer purposes
	Security	Medium	Role-based authorization exists, if appropriate. Guidance on encrypting all remote access (web interface, APIs) is available to implementors
	Scalability	Medium	There is at least one jurisdicion (e.g. country, state) deployment for which 20% of all "entities" are managed within the software. There has been at least one evaluation of software performance / load testing
